

A t-SNE plot comparing 'Original' data (blue dots) and 'Synthetic' data (orange dots) across 't-SNE 1' (x-axis, -60 to 40) and 't-SNE 2' (y-axis, -10 to 10). The 'Original' data forms several distinct, compact clusters, while the 'Synthetic' data forms a large, complex, and somewhat irregular structure on the right side of the plot. A legend in the top right corner identifies the two data types.
